

Market Research Simulation Activity

Attempt this activity to showcase what you have learnt in this unit.

Activity: Conduct a market research on drone specifications and performance to evaluate their suitability for different applications and analyse the competitive landscape.

Instructions:

1. Choose a Specific Type of Drone:

- Select a category of drones based on their primary use. Common categories include:
 - **Delivery Drones:** Used for transporting goods or parcels over short to medium distances.
 - **Surveillance Drones:** Employed for monitoring and security purposes, often used by law enforcement, border patrols, or private security firms.
 - **Agriculture Drones:** Designed for tasks such as crop monitoring, spraying, and soil analysis.

2. Conduct Online Research:

- Use the internet to find information on existing drone models within your chosen category. Focus on reputable sources such as manufacturer websites, online marketplaces (like Amazon or DJI), and tech review sites (such as TechRadar or CNET).
- Search for three different drone models from various manufacturers. Make sure to gather detailed information on each drone's:
 - **Features:** This includes camera quality, flight time, range, payload capacity, sensors, GPS capabilities, and autonomous flight modes.

- **Pricing:** Look for the latest price on official websites or popular e-commerce platforms. Note if the price includes accessories or if they are sold separately.
- **Target Market:** Identify who the drone is designed for (e.g., hobbyists, professionals, large-scale businesses) and what applications it is best suited for.

3. Identify and Analyse Three Competitors:

- Select three drones from different manufacturers that are direct competitors in the market. For each drone, document the following:
 - **Drone A:** Manufacturer, model name, primary features, price, and intended use.
 - **Drone B:** Manufacturer, model name, primary features, price, and intended use.
 - **Drone C:** Manufacturer, model name, primary features, price, and intended use.

4. Write a Brief Report:

- Prepare a report that compares the three selected drone models. Your report should cover the following points:
 - Overview
 - Comparison of Features
 - Pricing Analysis
 - Strengths and Weaknesses

Submit your report to your peers/mentor for feedback.
